

Bollettino pollini
Stazione: AP4-CASTEL DI LAMA

Mese: novembre

Periodo: 11.1

Dal: 29/10/2018

Al: 04/11/2018

Commento settimanale:

Il leggero rialzo delle temperature ha favorito un lieve incremento delle concentrazioni dei pollini aerodispersi che rimangono però sempre vicino allo zero, tranne le Pinacee e le Cupressacee che si attestano a concentrazioni leggermente superiori.

Previsioni dal 05.11.2018 al 11.11.2018

Non si prevedono variazioni significative dello spettro pollinico rispetto alla situazione attuale.

Commento allergologico (Dr. Gianfranco Zucca Giucca): Vista la bassa concentrazione pollinica, non si attende per ora una sintomatologia significativa.

Bollettino spore
Stazione: AP4-CASTEL DI LAMA

Mese: novembre

Periodo: 11.1

Dal: 29/10/2018

Al: 04/11/2018

Commento settimanale:

Restano a valori medi le concentrazioni delle spore fungine di Alternaria e bassi per tutte le altre spore.

Previsioni dal 05.11.2018 al 11.11.2018

Non si prevedono variazioni significative per le spore di Alternaria.

Commento allergologico (Dr. Gianfranco Zucca Giucca): Vista la concentrazione di Alternaria si consiglia ai pazienti sensibili a questa spora fungina di intraprendere la terapia solo se sintomatici.

Stazione: AP5-Comunanza

Mese: novembre

Periodo: 11.1

Dal: 29/10/2018

Al: 04/11/2018

Commento settimanale:

L'abbassamento delle temperature da martedì 30 ottobre ha determinato un significativo calo delle concentrazioni, che si rilevano vicino allo zero, di tutti i taxa del periodo.

Previsioni dal 05.11.2018 al 11.11.2018

Non si prevedono cambiamenti significativi della concentrazione dei taxa pollinici presenti.
